

Security Incident Report

1. Incident Title

Unusual High Volume of Requests from Multiple Source IPs

2. Date & Time

Detected On: 02 May 2026

Time Range Analyzed: All-time (up to 11:19:49 AM)

3. Detection Source

Tool: Splunk (Security Logs Index)

Query Used:

```
index=security_logs  
| rex field=_raw "(?<json_data>\{.*\})"  
| spath input=json_data  
| stats count by FromIP  
| sort -count
```

4. Summary of Findings

Total events analyzed: 758,389

Multiple external IP addresses are generating repeated requests.

Traffic is concentrated among a few top IPs.

5. Top Source IPs Identified

74.6.134.43 – 27

107.77.213.173 – 25

202.138.120.91 – 20

91.207.175.56 – 13

174.215.1.81 – 12

107.161.24.34 – 11

207.46.163.86 – 10

220.226.178.8 – 6

91.207.175.253 – 4

Others – ≤ 3

6. Observations

Skewed traffic pattern with few IPs dominating.

Possible logging issue due to 'null' entries.

Pattern resembles bot or automated traffic.

7. Potential Threat Assessment

Possible reconnaissance/scanning

Bot traffic

Brute-force attempts

Severity: Medium

8. Impact Analysis

No confirmed breach.

Potential risks include service degradation and unauthorized access attempts.

9. Recommended Actions

Block or rate-limit suspicious IPs

Enable WAF rules

Monitor login attempts

Fix logging issues

Deploy bot detection

10. Conclusion

Traffic pattern suggests automated or suspicious behavior. Preventive measures are recommended.
